

Dermavant is committed to fostering unprecedented change and unparalleled impact in immuno-dermatology.

We're doing this by thinking differently, pushing the boundaries of science and partnering with providers in new ways—all with one goal: transforming the lives of millions of patients with skin diseases.

Dermavant at-a-glance

- Clinical-stage biopharmaceutical company
- Founded September 2015
- A subsidiary of Roivant Sciences
- U.S. operations in Long Beach, California and Raleigh-Durham, North Carolina

About Dermavant

A Passion for Science and a Commitment to Dermatology

Dermavant Sciences, a subsidiary of Roivant Sciences, is a clinical-stage bio-pharmaceutical company focused on developing products that represent new treatment categories and address some of the greatest challenges providers and patients encounter.

The company's robust medical dermatology pipeline includes both late-stage and early-development product candidates that target specific unmet needs in two of the largest growing immune-dermatology markets, psoriasis and atopic dermatitis, as well as other large markets, including vitiligo, primary focal hyperhidrosis, and acne.

Dermavant is developing its lead product candidate, tapinarof (DMVT-505), as a novel therapeutic aryl hydrocarbon receptor modulating agent (TAMA) topical cream for the treatment of plaque psoriasis and atopic dermatitis, which affect approximately 8 million and 26 million people in the United States, respectively.
